Funding for this conference was made possible (in part) by the National Science Foundation's Chemical, Bioengineering, Environmental, and Transport Systems Division (Engineering of Biomedical Systems, Disability & Rehabilitation Engineering, Fluid Dynamics), Civil, Mechanical and Manufacturing Innovation Division (Biomechanics and Mechanobiology), and the Division of Materials Research (Biomaterials).

Funding for this conference was also made possible (in part) by 1R13EB024395-01 from the National Institute of Biomedical Imaging and Bioengineering and the National Institute of Arthritis and Musculoskeletal and Skin Diseases. The views expressed in written conference materials or publications and by speakers and moderators do not necessarily reflect the official policies of the Department of Health and Human Services; nor does mention of trade names, commercial practices, or organizations imply endorsement by the U.S. Government.

Prizes and other support for the Student Paper Competition were provided by the Bioengineering Division of the American Society of Mechanical Engineers.

The 2017 Summer Biomechanics, Bioengineering, and Biotransport Conference (SB³C) organizers gratefully acknowledge the support of the National Science Foundation, the National Institutes of Health, and American Society of Mechanical Engineers.

SETTING THE STANDARD

FOREWORD AND ACKNOWLEDGMENT

On behalf of the 2017 Summer Biomechanics, Bioengineering & Biotransport Conference organizers, welcome to SB³C2017. The unbeatable combination of great biomechanics, amazing colleagues, and a beautiful setting have made this our favorite meeting since we first attended, and we were honored to have the opportunity to lead a team of incredibly hard-working colleagues dedicated to continuing the rich SBC/SB³C tradition in 2017.

The theme of this year's meeting is "Growth, Development, Remodeling, and Repair," a dynamic and exciting area that has risen in prominence in recent years both at this conference and nationally. Highlighting this theme, the conference features a plenary lecture by Dr. Lakshminarayanan Mahadevan, Lola England de Valpine Professor of Applied Mathematics, Organismic and Evolutionary Biology, and Physics at Harvard University, as well as special sessions to celebrate the contributions of Dr. Larry Taber and Dr. Don Giddens.

The Student Paper Competition is a traditional highlight of the meeting. This year, the BS and MS poster competitions will be featured on Thursday evening, and the PhD oral presentations will be Friday afternoon. The American Society of Mechanical Engineers (ASME) is sponsoring the competition, providing funding for the cash prizes, and both ASME and the National Science Foundation helped fund registration fees for Student Paper Competition finalists. Another annual meeting highlight is the plenary lectures by winners of prestigious ASME awards: Kristin Myers from Columbia University (Y.C. Fung Young Investigator Award), Richard Neptune from the University of Texas (Van C. Mow Medal), Arthur Erdman from the University of Minnesota (Savio L-Y. Woo Medal), and Gerard Ateshian of Columbia University (H.R. Lissner Medal).

In addition to our Plenary and Award Lectures and regular technical sessions, there are a number of Workshops featured each day, including 'How-to' Sessions and a whole day focused on industrial interactions. Opportunities for social and networking interactions also abound — please see pages 8 to 16 of this program book for details on these events.

In addition to the features familiar to those of you who have attended prior SBC/SB³C meetings, we are pleased to report that SB³C2017 includes some new and notable features. This is our first desert venue ever, and we hope you enjoy the beauty of the surrounding Saguaro National Park. For the hikers, bikers, and golfers among you we have flipped the traditional meeting schedule to provide free time in the mornings, when temperatures are cooler and the desert is at its most beautiful. We are also proud that this is the biggest year ever for both the B.S. Student Paper Competition and the Diversity Travel Awards, thanks to a concerted effort by the organizing committee and fantastic support from the National Science Foundation.

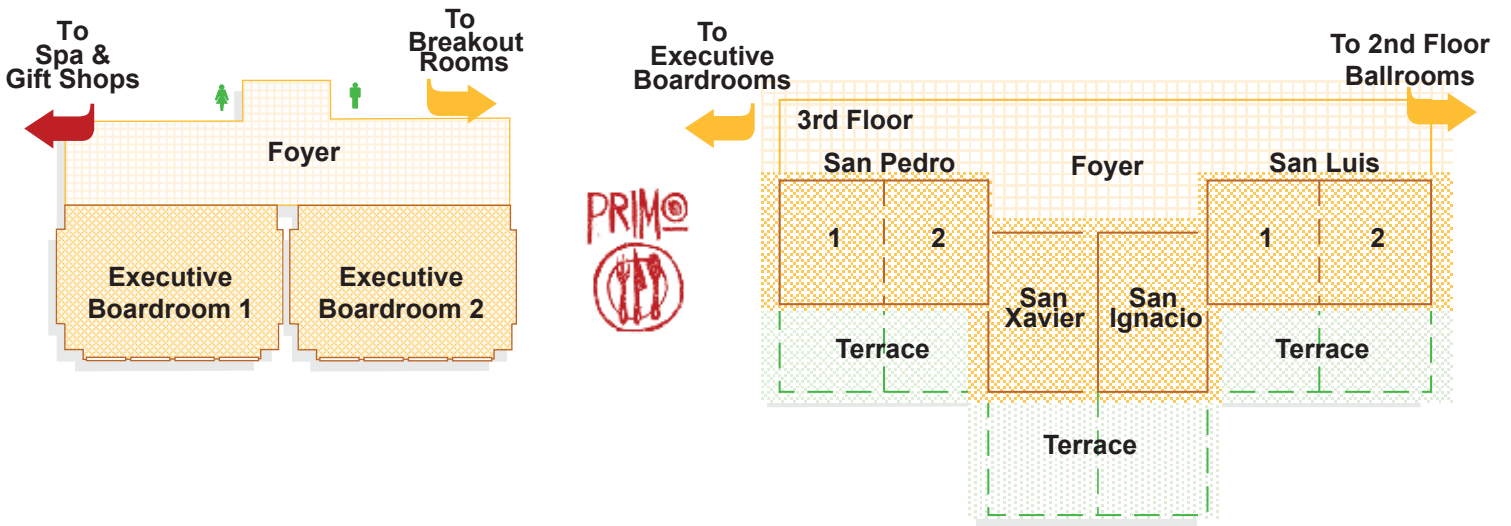

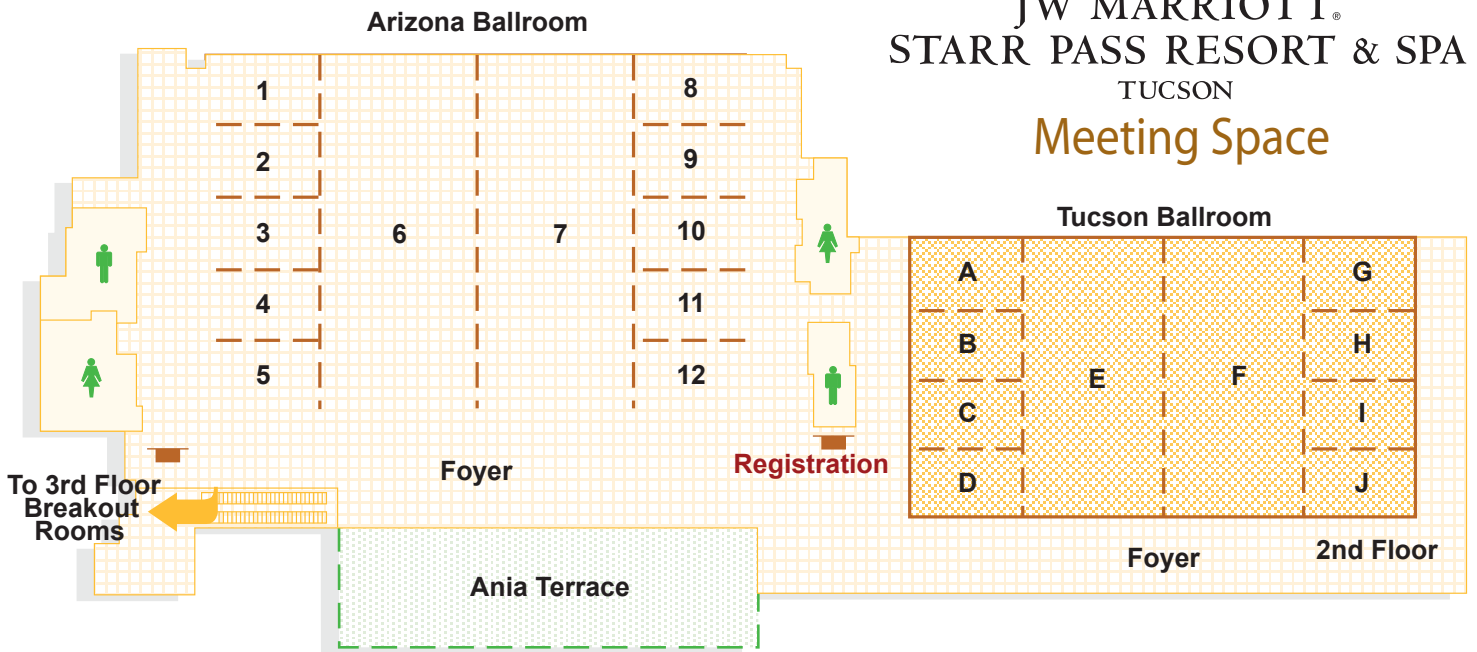

We would like to thank the Sponsors listed in this program, particularly the National Science Foundation, the American Society of Mechanical Engineers, and the National Institutes of Health, for their generous support. Even more importantly, we would like to thank the many of you who played critical roles in organizing SB³C2017. The Conference Organizers, Program Committee, and Student Paper Competition Committee listed in the program devoted an enormous amount of time and energy to this conference, but that was just the beginning: together with abstract reviewers and session chairs, more than 200 people helped make SB³C2017. We hope you enjoy it, and then join the team for SB³C2019. We'll see you at the Tequila Toast,

Jeff Holmes, Conference Chair

ACCESSIBILITY

Both floors (2nd and 3rd) of the meeting spaces are accessible. The following hotel spaces are accessible: main entrance, pathway to registration, registration desk, route to accessible guest rooms (which have 32 inch wide openings), business center entrance, fitness center entrance, pool entrances (with self-operating lifts or sloped entry for all pools), spa entrance, restaurants and lounges. The hotel has on site accessible self-parking, and service animals allowed for persons with disabilities. Additionally, golf carts are available on request to assist with transportation at check-in / check-out and around the resort. Participants with disabilities are encouraged to contact the general manager of the hotel prior to arrival to arrange this service.

NOTE 1: SB³C Organizing committee meeting: members for three conference years (2017, 2018, 2019) should attend. SB³C Program committee meeting: Program Chair (2018), Program Chair (2016), and Chairs of Technical Committees. Organizing Committee chaired by Conference Chair 2017; Program Committee chaired by Program Chair 2017.

NOTE 2: Conference Oversight Committee consists of the Conference Chairs from 2016-2019 and the Program Chairs from 2016-2019. Chaired by Conference Chair 2016.

INSTRUCTIONS FOR POSTER PRESENTERS

The poster room will be available to conference attendees from Thursday morning to Saturday early morning. All posters should be hung before 11 AM on Thursday; the room will be open from 6:00 AM on Thursday for this purpose.

There will be two formal poster sessions during which time poster presenters should be available to discuss their work. **Poster Session I** will be held Thursday June 22nd from 5:30-7:30 PM and **Poster Session II** will be held Friday June 23rd from 12:30-2:00 PM. The MS and BS Poster Competition will take place during Poster Session I and all finalists (Posters #1-61, as indicated in the program book) should be present at their poster during this entire period.

All other posters will present in both sessions. In Poster Session I, Posters #62-147 will present from 5:30-6:30 PM, and Posters #148-275 will present from 6:30-7:30 PM. In Poster Session II, posters #62-147 will present from 12:30-1:15 PM, and posters #148-275 will present from 1:15-2:00 PM.

All posters must be removed by 5:30 PM on Friday. Any poster remaining after this time will be removed by the organizers.

SPEAKER READY ROOMS

Session rooms will be available outside of scheduled meeting times. Speakers are encouraged to test their presentations in the appropriate room prior to their presentation.

INDUSTRY DAY

The Industry Advisory Board (IAB) consists of members from Industry and Academia who are interested in enhancing connections that can be beneficial to both. Industry gains access to important research capabilities and academics benefit from a more customer needs focused approach to problem solving. Combining the resources of both entities can create strong teams for solving critical medical needs. Students also benefit from making important connections in industry that help them obtain jobs and companies have opportunities to meet talented students to fill important positions.

This year the IAB has organized several events specifically designed to meet the needs of conference participants from industry. We scheduled “Industry Day” to begin at the end of the regular workweek, from Friday evening through Saturday afternoon. We also coordinated with other committees for co-sponsored events (see program for details).

IAB/SLC Networking Mixer

Students and industry representatives join together, make connections with potential employers, and network with a wide variety of participants. *(registration required)*

BEDRock Concert

Don't miss this exciting event! The rock concert is one of the highlights of the conference providing opportunities to relax and socialize (unless you are in the band).

Industry Workshop

Learn how to “Establish and Improve Collaborations between Industry and Academia” from experts in the field. Hear from the experts and participate in small group discussions to get your questions answered.

ASME Sponsored Industry Luncheon & IAB Meeting

This year we are combining our IAB meeting with a special luncheon sponsored by ASME. The luncheon will provide good food and opportunities to establish and reinforce connections between industry and academic partners. *(registration required; location provided upon registration)*

Technical Session

Attend a session of your choice based in your area of interest. Consider the **Medical Devices 1**: “Experimental Modeling for Clinical Surgical Applications” session.

WEDNESDAY, JUNE 21**1:30-2:30 PM****'How-To' Session: SimVascular Workshop and New User Training****Tucson AB**

Organizers: Alison Marsden (Stanford University), Shawn Shadden (UC Berkeley), and Nathan Wilson (Open Source Medical Software Corporation)

SimVascular is the only available open source software package that provides a complete pipeline from medical image data to cardiovascular blood flow simulation results and analysis (www.simvascular.org). It offers capabilities for image segmentation, unstructured adaptive meshing, physiologic boundary conditions, and an efficient Navier-Stokes finite element solver with fluid structure interaction. An accompanying vascular model repository provides over 100 clinical data sets with simulation results from different parts of the vasculature to enable research. Extensive online documentation and tutorials with clinical examples are provided online. This workshop will introduce several exciting new features of SimVascular, including a completely overhauled user interface, and improved solid modeling operations. We will interactively take new users through a step-by-step tutorial, highlighting new software features. We will cover basic steps of model construction, meshing and flow simulations, as well as underlying theory, numerical methodology and best practices for high quality results. Following a series of interactive demonstrations, we will moderate a question and answer session for current and potential users.

WEDNESDAY, JUNE 21**1:30-2:30 PM****'How-To' Session: FEBio Workshop – New features****Tucson CD**

Organizers: Jeff Weiss (University of Utah) and Gerard Ateshian (Columbia University)

The FEBio software suite is a set of free software tools for nonlinear finite element analysis in biomechanics and biophysics (febio.org). It offers modeling scenarios, constitutive models and boundary conditions that are relevant to many research areas in biomechanics. The software is open-source, and pre-compiled executables for Windows, Mac OS X and Linux platforms are available. This workshop covers some of the latest and upcoming features in FEBio, including a fluid solver for computational fluid dynamics, improved shell formulations for large deformations, porous shells to model solvent and solute transport in membranes, expanded parameter optimization capabilities, methods to implement homogenization, and a FEBiochem plugin to solve for solute transport and reactive kinetics in non-deforming media.

WEDNESDAY, JUNE 21**4:30 PM - 6:00 PM**

Special Tribute Session: Tucson CD
Celebration for Larry Taber: Growth and Remodeling in
Development and Disease

The purpose of this session is to honor Larry Taber, who is retiring following 39 years of pioneering work in the fields of developmental biomechanics, and tissue growth and remodeling. Larry Taber is currently the Dennis and Barbara Kessler Professor of Biomedical Engineering and Professor of Mechanical Engineering and Materials Science at Washington University in St. Louis. He moved to WU in 1997, after spending four years at the General Motors Research Laboratories and 15 years at the University of Rochester. He has published more than 100 journal articles on a wide range of topics including cochlear mechanics, nonlinear shell

SPECIAL SESSIONS, PLENARY SESSIONS & WORKSHOPS

theory, cardiovascular mechanics, and the mechanics of growth and development. Larry is a Fellow of the American Society of Mechanical Engineers and the American Institute for Medical and Biological Engineering. From 2011-2016, he served as co-editor-in-chief of the journal Biomechanics and Modeling in Mechanobiology. Larry is the only three-time winner of the Richard Skalak Award for the best paper published in the Journal of Biomechanical Engineering 2004, 2007, 2015.

Mixer: Diversity / Mentoring Event

Arizona 3-5

Organizers: Alison Marsden (Stanford University) and Naomi Chesler (University of Wisconsin-Madison)

A “chilly” climate at the peer, departmental and institutional levels is often responsible for poor retention of women graduate students and in academic positions pre- and post-tenure. Isolation and accumulated effects of unconscious bias are also key factors in the loss of persons from underrepresented minorities (URM) groups from academic positions. Professional societies and associated conferences such as SB³C can provide a venue for reducing isolation and increasing mentoring opportunities that help refresh and promote women and members of URM groups at all stages of the academic career path.

The diversity and inclusion committee is therefore happy to announce a mentor-mentee match mixer at SB³C, designed to develop mentoring relationships between junior and senior colleagues in biomechanics, bioengineering, and biotransport. The mixer will include some initial remarks on the mentoring process and best practices in mentoring and in being mentored, after which the majority of the time will be devoted to one-on-one or one-on-two conversations between mentors and mentees, promoting discussion on specific matters of importance to the individual participants to complement the broader guidelines.

Pre-registration is required. Questions may be directed to Alison Marsden at amarsden@stanford.edu

THURSDAY, JUNE 22	2:15 PM - 3:45 PM

Special Tribute Session:

Tucson GH

Don Giddens' Impact on Cardiovascular Fluid Dynamics and Atherosclerosis

The purpose of this session is to honor and celebrate Don Giddens' 45+ year academic career, highlighting his seminal research contributions, committed role to engineering education and mentorship, dedicated service to the ASME-BED, and visionary leadership in Bioengineering. Don is considered one of the pioneers in the biofluid mechanics research community, making seminal contributions in the area of fluid dynamics and arterial disease. He has mentored countless graduate students and post-docs, many of whom have gone on to successful careers in academia and industry. Don's academic career includes serving as Chair of the Department of Aerospace Engineering at Georgia Tech (1988-92), Dean of the Whiting School of Engineering at Johns Hopkins (1992-97), founding Chair of the Coulter Department of Biomedical Engineering at Georgia Tech/Emory (1998-2002), and Dean of the College of Engineering at Georgia Tech (2002-2011). He is the past President of the ASEE (2012). At the ASME society level, Don received the H.R. Lissner Medal (1993) and R.H. Thurston Lecture Award (1996). Don is a member of the National Academy of Engineering and is a Fellow of the ASME, the AHA, and AIMBE (founding fellow).

THURSDAY, JUNE 22**4:00 - 4:30 PM****Y.C. Fung Young Investigator Award Lecture:****Tucson EF****The Mechanical Environment of Pregnancy****Kristin M. Myers, PhD** (Columbia University)

Description: The reproductive soft tissues supporting the fetus undergo some of the most dramatic and unique growth and remodeling events in the human body. During pregnancy, the uterus and fetal membrane must grow and stretch to accommodate the fetus. Simultaneously, the cervix must remodel and be a mechanical barrier to keep the fetus within the uterus. All three tissues must withstand mechanical forces to protect, support, and maintain an optimal growth environment for the developing baby. Then, in a reversal of roles, ideally nearing term, the uterus begins to contract and the cervix deforms to allow for a safe delivery. The magnitude of stress and stretch of these soft tissues supporting the fetus are thought to control physiologic processes that regulate tissue growth, remodeling, contractility, and rupture. It is generally hypothesized that these mechanical signals are clinical cues for normal labor and preterm birth, a major long-lasting public health problem with heavy emotional and financial consequences. In this talk I will reveal what we know about the soft tissue mechanics of pregnancy. I will present finite element models of pregnancy based on ultrasonic anatomical data, and I will examine the mechanical function of the soft tissues supporting the fetus. I will also characterize cervical material properties using a hyperelastic constitutive model that accounts for the cervical collagen fiber architecture. Through this experimental and modeling effort I aim to identify which factor or combination of factors is responsible for clinically-observed mechanical dysfunction in pregnancy.

THURSDAY, JUNE 22**4:30 - 5:00 PM****Van C. Mow Medal Award Lecture:****Tucson EF****Biomechanical Analyses of Human Movement and the Implications for Clinical Interventions****Richard R. Neptune, PhD** (University of Texas at Austin)

Description: The human neuromusculoskeletal system is exceedingly complex. As a result, gaining insight into normal and pathological movement remains a challenge due to the extremely difficult task of measuring the principle elements of muscle coordination and the effects of individual muscle forces on the resulting movement. This talk will discuss how experimental and modeling and simulation techniques are being used to gain insight into the biomechanics and neuromotor control of human movement with the goal to improve rehabilitation outcomes for those with movement impairments. Specifically, we will look at how individual muscles contribute to specific biomechanical task demands of human movement and the implications for prescribing clinical interventions.

THURSDAY, JUNE 22**5:00 - 5:30 PM****Savio L-Y. Woo Medal Award Lecture:****Tucson EF****Lessons Learned from Kinematics Research Applied to Medical Device Design****Arthur G. Erdman, PhD** (University of Minnesota)

Description: Current medical device development is often limited to incremental changes to known products or suboptimal solutions for which more insight is desired about the true impact of design decisions upon device interactions with tissue and organs. Major advances in medical device design and manufacture currently require extensive/expensive product cycles that usually include animal and clinical trials. New computational design methodologies are needed to provide designers with more meaningful, accurate feedback earlier in the design process; to enable designers to more broadly

SPECIAL SESSIONS, PLENARY SESSIONS & WORKSHOPS

explore the space of potential design alternatives; and to expand the boundaries of complex designs that are possible given today's computer-assisted design tools. The proposed methodology includes human-in-the-loop optimization techniques that were first applied for designing linkage mechanisms. New tools for the medical device industry will allow accelerated and less costly development cycles including more robust modeling environments.

FRIDAY, JUNE 23

11:00 AM - 12:30 PM

Workshop: Additive Manufacturing and Biofabrication in Mechanobiology

Tucson AB

Organizers: Jessica Sparks (Miami University), Grace O'Connell (University of California, Berkeley), and Matthew Fisher (North Carolina State University / University of North Carolina)

This session will focus on research that harnesses the unique capabilities of additive manufacturing and biofabrication technologies to drive the design, development, and manufacturing of biological systems or biomedical devices. Biofabrication is understood to include approaches for bioprinting, bioassembly, or tissue maturation processes, among other strategies. Other topics of interest include use of additive manufacturing for non-biological products with biomedical relevance, such as flexible/wearable electronics or surgical guides. The goal of the session is to promote and highlight important synergies between fundamental biomechanics and mechanobiology research and more applied, technology-driven investigations on additive manufacturing or biofabrication methods. This workshop is a joint workshop between the Solid Mechanics and the Cell & Tissue Engineering technical committees. Important themes include:

- (Mechanics) Bioprinting for functional tissue/organ development (e.g., with or without a bioreactor)
- (Cell and Tissue) Printable complexity of materials and cells used to create a single scaffold
- Challenges and limitations in current printing technology (e.g., resolution, printing integrity)

Speakers:

Jay B. Hoying, PhD (Advanced Solutions Life Sciences) -- "Biofabrication of the Vasculature"

Adam W. Feinberg, PhD (Carnegie Mellon University) -- "Rebuilding the Heart by 3D Bioprinting of the Extracellular Matrix"

Wei Gao, PhD (University of California, Berkeley) -- "Wearable Sweat Biosensors"

FRIDAY, JUNE 23

11:00 AM - 12:30 PM

Workshop: Ocular Biomechanics: What's Our Vision?

Tucson CD

Organizers: Ian Sigal (University of Pittsburgh, Ophthalmology) and Jonathan Vande Geest (University of Pittsburgh, Bioengineering)

The eye must seamlessly integrate several complex systems in order to achieve its proper function – effective capture and transmission of a visual signal to the brain. These subsystems rely on finely tuned biomechanics, so that mechanical properties and microstructure of ocular tissues play a critical role in providing the appropriate environment to promote proper integration and function of these complex subsystems and the eye itself. The complexity of this organ requires the use of experiments and modeling to understand the role of ocular biomechanics on visual function. This knowledge is also necessary to improve the available tools for diagnosis and treatment of eye disease, as well as to develop novel methods to enhance vision.

This symposium will bring experts in ocular biomechanics together to disseminate state of the art tools experimental, theoretical and computational modeling of the eye. A particular focus of this symposium will be discussions related to the future of this field and how ocular biomechanics might play a role in restoring vision in a variety of ocular pathologies and injuries.

Speakers:

Ross Ethier, PhD (Georgia Institute of Technology)

Rouzbeh Amini, PhD (University of Akron)

Vicky Nguyen, PhD (Johns Hopkins University)

Ian Sigal, PhD (University of Pittsburgh)

Jonathan Vande Geest, PhD (University of Pittsburgh)

Bradley Greger, PhD (Arizona State University)

Workshop: Grad School Pro Tips – Responsible Conduct in Science

Tucson IJ

Organizers: Mitra Shabani (Clemson University), Aslak Wigdahl Bergersen (Simula Research Laboratory), Katrina J Hansen (Worcester Polytechnic Institute), and Bhargavi Krishnan (University of Kansas)

During university studies, students are trained in the subject they study, such as biomechanics, numerical methods etc., however they are not taught the study of science, or more practical tasks such as how to peer review. The goal of this workshop is therefore to discuss on how to conduct science responsibly. The workshop will cover a variety of topics including responsible conduct in computational modeling, responsible conduct working with data: acquisition, management, sharing, and ownership of data and responsible conduct in collaborations, peer review, publication practices, and authorship. The workshop will be organized as a panel comprised of fellow presenters at the SB³C followed by questions from the audience.

Speakers:

Sara Wilson, PhD (University of Kansas)

Robert Nerem, PhD (Georgia Institute of Technology)

Michele Grimm, PhD (National Science Foundation and Wayne State University)

Jeffrey Holmes, PhD (University of Virginia)

Moderator:

Kristian Valen-Sendstad, Ph.D. (Simula Research Laboratory, Norway)

FRIDAY, JUNE 23	11:00 AM - 12:30 PM

Workshop: Advanced Medical Imaging for Assessing Physiological Flows

San Luis

Organizer: Alejandro Roldán-Alzate (University of Wisconsin – Madison)

Recent advances in medical imaging technologies have improved our ability to non-invasively assess fluid dynamics phenomena in physiological and pathological conditions. The combination of these techniques with experimental set ups as well as numerical simulations have the potential to serve as predictive tools for surgical and treatment planning. The purpose of this workshop is to review the available medical imaging techniques and how those could help the fluid biomechanics research.

Speakers:

Craig J. Goergen, PhD (Weldon School of Biomedical Engineering, Purdue University) --

Doppler Ultrasound Imaging for Blood Flow Assessment

Kevin M. Johnson, PhD (University of Wisconsin – Madison) -- MRI techniques for imaging fluid flow and motion.

SPECIAL SESSIONS, PLENARY SESSIONS & WORKSHOPS

Alex Barker, PhD (Feinberg School of Medicine, Northwestern University) -- MRI Derived Biomarkers of Hemodynamic Performance

Charles Strother, MD (University of Wisconsin – Madison) -- Time Resolved 3D DSA (4D DSA) and Angiographic Flat Detector Derived Dynamic Brain Perfusion Maps; Anatomy and Physiology in the Angiographic Suite

FRIDAY, JUNE 23	5:45 - 6:45 PM

Plenary Lecture: On Growth and Form – Geometry, Physics and Biology **Tucson EF**

L. Mahadevan, PhD (School of Engineering and Applied Sciences, and Departments of Physics, and Organismic and Evolutionary Biology, Harvard University)

A century ago, the publication of D’Arcy Thompson’s classic “On growth and form” laid out his vision to look at form from a mathematical and physical perspective, a view that has finally begun to permeate into the fabric of modern biology. Motivated by qualitative and quantitative biological observations, I will show that there is a “method in the madness” - using examples of growth and form in cells, tissues and organs such as a freely growing pollen tube, undulating fringes on a leaf or petal, the growth of floral spurs, the looping of the gut and the coiling of tendrils. In each case, we will see how a combination of biological and physical experiments, mathematical models and computations allow us to unravel the quantitative basis for the diversity and complexity of biological form, with tantalizing links to evolutionary canalization, biomimetic technologies, and new aspects of geometry and analysis.

Mixer: IAB/SLC Networking Mixer **Arizona 3-5**

Organizers: Industrial Advisory Board and Student Leadership Council

This year the IAB has organized several events specifically designed to meet the needs of conference participants from industry (see page 8 for additional details and events). At this networking mixer, students and industry representatives join together, make connections with potential employers, and network with a wide variety of participants. *(registration required)*

FRIDAY, JUNE 23	6:45 - 7:45 PM
------------------------	-----------------------

SB³C Women’s Networking Event **Arizona 2**

Organizer: Rita M. Patterson (University of North Texas Health Science Center)

We welcome all University Faculty, Post doctorate, Government, and Industry women to attend.

Our purpose is to provide mentoring, networking and communication for women involved in biomedical engineering to help further their careers and facilitate award nominations.

SATURDAY, JUNE 24**10:30 AM - 12:00 PM****Workshop:****Tucson AB****Establishing and Improving Collaboration Between Industry and Academics**

Organizers: Martin L. Tanaka (Western Carolina University) and Alan Eberhardt (University of Alabama at Birmingham)

Establishing collaborations between industry and academics can be beneficial to both. Industry gains access to important research capabilities and academics benefit from a more customer needs focused approach to problem solving. Combining the resources of both entities can create a strong team that can focus on solving critical medical needs. However, the pathway towards joining forces comes with challenges. We have invited two experts to discuss how they initiate and manage these collaborations. Dr. Art Erdman is the Director of the Medical Devices Center at the University of Minnesota, a Fellow of ASME and AIMBE, and former editor of the ASME Journal of Medical Devices. Our second expert, Dr. Ahmed Al-Jumaily, is the Founder & Director of the Institute of Biomedical Technologies at Auckland University of Technology, a Fellow of ASME, and the Track Organizer for Biomedical & Biotechnology Engineering at ASME's IMECE. The workshop will begin with brief presentations by the organizers and key speakers. Following this will be small group discussions where workshop participants can ask the organizers/speakers specific questions. This workshop is sponsored by the Industry Advisory Board; Design, Dynamics, and Rehabilitation Technical Committee; and the Education Committee.

Speakers:

Art Erdman, PhD (University of Minnesota)

Ahmed Al-Jumaily, PhD (Auckland University of Technology – New Zealand)

SATURDAY, JUNE 24**12:30 PM - 2:00 PM****Workshop:****Tucson AB****From Bench to Bedside: Mechanics, Materials, and Metrics for Tendon Repair and Regeneration**

Organizers: Nelly Andarawis-Puri (Cornell University), Alice Huang (Mount Sinai School of Medicine), and Spencer Lake (Washington University)

Tendon and ligament damage is one of the major causes of musculoskeletal dysfunction, yet few new therapies to treat these disorders have emerged, despite considerable clinical interest. Potential strategies to treat damage must integrate numerous considerations, including structure, mechanics, materials, and cell biology. To address these considerations, this workshop will provide an overview of the state of the field, current perspectives, and new insights on tendon biomechanics and tissue engineering/regeneration. Presentations by leading experts will be followed by a breakout discussion with guided talking points to identify new directions for the field and foster collaboration across groups.

Speakers:

Ray Vanderby, PhD (University of Wisconsin, Madison)

Ellen Arruda, PhD (University of Michigan)

SATURDAY, JUNE 24	12:30 PM - 2:00 PM
--------------------------	---------------------------

Workshop:**Tucson CD****Using MATLAB in Biomedical Engineering Education and Research**

Organizers: Rouzbeh Amini (University of Akron), Alisa Morss Clyne (Drexel University), Corinne Henak (University of Wisconsin-Madison), Joseph Iaquinto (VA/University of Washington), Ferris Pfeiffer (University of Missouri), Ye Cheng (Mathworks), Anita Singh (Widener University), Sara Wilson (University of Kansas)

MATLAB is a programming language with numerous built-in functions and examples useful in biomedical engineering education and research. This workshop is designed for a broad audience of SB3C attendees, including graduate students, post-doctoral trainees, and faculty members. During the first 30 minutes of the workshop, Dr. Richard Hart will share his experiences teaching a sophomore biomedical engineering course on “Numerical Simulations in Biomedical Engineering,” which extensively uses MATLAB. During the remaining 60 minutes, Dr. Balaji Sharma from MathWorks will demonstrate how to use MATLAB in education and research, covering topics such as Hardware for project-based learning (such as Arduino/Raspberry Pi), Live editor for interactive teaching, Autograder for instant feedback, App Designer to create MATLAB apps, or Internet of things and data analytics. Through this workshop, attendees will learn about recent features in MATLAB that are relevant to bioengineering teaching and research.

Speakers:**Richard Hart, PhD** (The Ohio State University)**Balaji Sharma, PhD** (Mathworks)

H.R. Lissner Medal Award Lecture:**Tucson EF****A Perspective on the Role of Modeling in Biomechanics****Gerard Ateshian, PhD** (Columbia University)

Bioengineering is an interdisciplinary field where engineers often interact with physicians, biologists, biochemists, and other practitioners in the biomedical sciences. Engineers are trained to include modeling as part of their scientific approach for addressing societal needs, but sometimes find themselves at odds trying to justify this fundamental strategy to members of scientific communities that have traditionally relied primarily on experimental observations for uncovering and deducing mechanisms in living systems. This presentation provides my perspective on the challenges, and occasional successes, encountered with the modeling of biological tissues and associated processes in living systems, with illustrations from our research in cartilage mechanics and tissue engineering. I also present my perspective for a road plan to advance biomechanics theories to meet these challenges in the long term.

**2017 RICHARD SKALAK AWARD
ASME JOURNAL OF BIOMECHANICAL ENGINEERING**

Each year the Editors-in-Chief and the editorial board members of the ASME Journal of Biomechanical Engineering select a paper that they believe is the most meritorious of all the papers published in the Journal in the previous calendar year. The authors of this paper are the recipients of the Richard Skalak Award, named after an early leader within the ASME Bioengineering community. The 2017 award winners will be announced at the conference banquet.

The H.R. Lissner Medal recognizes outstanding achievements in the field of bioengineering. These achievements may be in the form of (1) significant research contributions in bioengineering; (2) development of new methods of measuring in bioengineering; (3) design of new equipment and instrumentation in bioengineering; (4) educational impact in the training of bioengineers; and/or (5) service to the bioengineering community, in general, and to the Bioengineering Division of ASME, in particular. The Bioengineering Division of ASME established the H. R. Lissner Award as a divisional award in 1977. It was upgraded to a society award in 1987, made possible by a donation from Wayne State University and is named in honor of Professor H. R. Lissner of Wayne State University for his pioneering work in biomechanics that began in 1939.

2017 Gerard A. Ateshian, PhD

Dr. Gerard A. Ateshian received his B.S. (1986), M.S. (1987) and Ph.D. (1991) degrees in Mechanical Engineering at Columbia, pursuing his doctoral research in the Department of Orthopaedic Surgery. He stayed on as a faculty member at Columbia where he is currently the Andrew Walz Professor of Mechanical Engineering. Dr. Ateshian has been a longstanding member of the Bioengineering Division of ASME (BED), having served on multiple committees and rising to the position of Division Chair in 2006. He has mentored 25 Ph.D. students,

42 M.S. students and 61 B.S. students to date. He has received the Great Teacher Award from the Society of Columbia Graduates in 2002 and the Columbia Engineering Alumni Association Distinguished Faculty Teaching Award in 2012. Dr. Ateshian's research has addressed many different facets of osteoarthritis research with an experimental focus on cartilage mechanics and tissue engineering, while also making significant theoretical and computational advances in the field of continuum mechanics. He was awarded the Y.C. Fung Young Investigator Award from the BED in 1997 and the OARSI Basic Science Award from the Osteoarthritis Research Society International in 2013. He has published over 200 peer-reviewed full-length manuscripts, with 19,000 citations and an h-index of 71. Dr. Ateshian is also a co-developer of the FEBio finite element open-source software suite, which addresses the specific needs of the biomechanics community. Currently, there are more than 5,100 registered FEBio users; since its initial release in 2007 there have been more than 110,000 software downloads.

Savio L-Y. Woo Medal

The Savio L-Y. Woo Translational Biomechanics Medal was established in June 2015 as a society-level award and recognizes a sustained level of meritorious contributions in translating bioengineering research to clinical application, to improve the quality of life. This award is named in honor of Savio Lau-Yuen Woo, Ph.D., Distinguished University Professor of Bioengineering and the Founder and Director of the Musculoskeletal Research Center (MSRC), a diverse multidisciplinary research and educational center in the Department of Bioengineering at the University of Pittsburgh. Beyond pioneering and world-renowned scholarly contributions, Professor Woo has made an enormous impact in 40 years of translational research that has significantly contributed to the delivery of healthcare. Any member of ASME who has demonstrated a sustained level of outstanding achievement in translating bioengineering findings to the clinical community may be eligible for this medal.

2017 Arthur Erdman, PhD

Arthur G. Erdman, P.E., is the Richard C. Jordan Professor and a Morse Alumni Distinguished Teaching Professor of Mechanical Engineering at the University of Minnesota, specializing in mechanical design, bioengineering and product design. In July 2007, he was selected as the Director of the Medical Devices Center at the U of M and is also the Co-Editor of the ASME Journal of Medical Devices.

He received his BS degree at Rutgers University, his MS and Ph.D. at RPI. Dr. Erdman has published over 370 technical papers, 3 books, is co-inventor of over 45 patents and shares with his former students 9 Best Paper Awards at international conferences. Dr. Erdman has had research collaborations with numerous health sciences faculty including those in Ophthalmology, Neuroscience, Epidemiology, Cardiology, Urology, Orthopedics, Surgery, Dentistry, Otolaryngology, Veterinary Medicine and Sports Biomechanics.

He has consulted at over 50 companies in mechanical, biomedical and product design, including Xerox, 3M, Andersen Windows, Proctor and Gamble, HP, Rollerblade, Sulzer Medica, St. Jude Medical and Yamaha. He has received a number of awards including ASME Machine Design Award, the ASME Outstanding Design Educator Award and the U of M Outstanding Service Award. Erdman is a Fellow of ASME and a Founding Fellow of AIMBE. Dr. Erdman has served as chair of the Publications committee, the Design Division and the Bioengineering Divisions of ASME. He has also been the Chair of fifteen Design of Medical Devices Conferences which are held next to the University of Minnesota each April.

In April 2013, he received the Academy of Medical Device Innovators Award from the University of Minnesota and The Institute for Engineering for Medicine. Dr. Erdman was selected as a "Titan of Technology" in the Technology Advocate category October 2014 by the Minneapolis/St. Paul Business Journal. In 2017 he received the ASME Savio L-Y Woo Translational Biomechanics Medal, for "translating meritorious bioengineering science to clinical practice through research, education, professional development, and with service to the bioengineering community."

Van C. Mow Medal

2005 Kyriacos A. Athanasiou
 2006 Robert Lie-Yuan Sah
 2007 Lori A. Setton
 2008 Scott L. Delp
 2009 Michael Sacks
 2010 Tony M. Keaveny
 2011 David A. Vorp
 2012 John Bischof
 2013 Jeffrey Weiss
 2014 Christopher R. Jacobs
 2015 Dawn M. Elliott
 2016 Beth A. Winkelstein
 2017 Richard R. Neptune

The Van C. Mow Medal is bestowed upon an individual who has made significant contributions to the field of bioengineering through research, education, professional development, leadership in the development of the profession, as a mentor to young bioengineers, and with service to the bioengineering community. The individual must have earned a PhD or equivalent degree between ten and twenty years prior to June 1 of the year of the award. The award was established by the Bioengineering Division in 2004.

2017 Richard R. Neptune, PhD

Dr. Richard R. Neptune earned his Ph.D. in Mechanical Engineering from the University of California, Davis. He held post-doctoral positions at the University of Calgary and the VA Palo Alto Rehabilitation Research and Development Center. He has served on the Department of Mechanical Engineering faculty at UT

Austin since 2001. His research integrates musculoskeletal modeling, computer simulation and experimental analyses to identify the neuromotor and biomechanical mechanisms that contribute to locomotor impairments in those with movement disabilities including lower-limb amputees, stroke patients and wheelchair users. His research also seeks to improve the performance of orthotic and prosthetic devices using advanced additive manufacturing techniques. His research has been supported primarily by the Department of Veteran's Affairs, National Science Foundation and National Institutes of Health. He has received the American Society of Biomechanics Young Scientist Award and CAREER award from the National Science Foundation. He is also the recipient of the Da Vinci Award from the Engineering Society of Detroit and National Multiple Sclerosis Society and the Outstanding Young Scientist Award from the Houston Society for Engineering in Medicine and Biology. He recently received the Joe and Bettie Branson Ward Endowed Excellence Award from The University of Texas at Austin for his teaching and research that has contributed to changes of positive value to society. He also received the Lockheed Martin Aeronautics Company Award for Excellence in Engineering Teaching and was elected Fellow of the American Society of Biomechanics. He has served ASME in a number of capacities including organizing and chairing conference sessions and as an Associate Editor for the Journal of Biomechanical Engineering. He is currently the Chair of the Department of Mechanical Engineering and a Provost Teaching Fellow, and holds the John T. MacGuire Professorship in Mechanical Engineering.

 2017 Kristin Myers

The Y.C. Fung Young Investigator Award is given to young investigators who are committed to pursuing research in the field of Bioengineering and have demonstrated significant potential to make substantial contributions to the field of Bioengineering. Such accomplishments may take the form of, but are not limited to, design or development of new methods, equipment or instrumentation in bioengineering; and research publications in peer-reviewed journals. The award was established by the Bioengineering Division in 1985 and operated as a division award until 1998 when it was elevated to a Society award.

2017 Kristin Myers, PhD

Kristin Myers is an Associate Professor in the Department of Mechanical Engineering at Columbia University in the City of New York. She received her Mechanical Engineering doctorate (2008) and masters (2005) degrees from MIT under the mentorship of Dr. Simona Socrate and her bachelors (2002) degree from the University of Michigan under the guidance of Dr. Alan Wine- man. In 2010 she completed post-doctoral research in the field of ocular biomechanics mentored by Dr. Thao (Vicky)

Nguyen at Johns Hopkins. In 2010 she founded the Myers Soft Tissue Lab at Columbia, which uses experimental, theoretical, and computational mechanics to solve problems in Women's Health and Reproductive Biomechanics. With clinical translation in mind, her lab is uncovering the structural antecedents of preterm birth. Through the experimental interrogation of nonpregnant and pregnant cervical tissue and multi-organ finite element models of pregnancy, her work has: 1) quantified the nonlinear and time-dependent material behavior of the cervix, 2) measured the evolution of cervical collagen crosslinking throughout a murine pregnancy, identifying the key gestational time points of collagen network remodeling, 3) established an anisotropic material model for human cervix informed by collagen directionality data 4) quantified and visualized the loading environment of human pregnancy to uncover the load-sharing capability

of the uterus, fetal membranes, and cervix, and 5) demonstrated the structural role of the cervical collagen fiber architecture and collagen fiber strength in preventing early cervical deformation. Dr. Myers' work is funded by the NIH, NSF, and the March of Dimes, including the NSF CAREER award to develop the framework to model hormone-mediated tissue growth and remodeling of the uterine cervix during pregnancy.

HOW TO NAVIGATE THIS BOOK

This year the organizing committee made a few changes to the program book related to the assigned abstract number, (e.g. SB³C2017-1 or SB³C2017-P1). Below are examples of a technical session presentation and a poster presentation as they are presented in the program book with a box around the abstract number.

Technical Session (Podium) Presentation Example

2:45PM **Alterations in Mechanical Properties and In Vivo Geometry of the Mitral Valve Following Myocardial Infarction**

SB³C2017-1

Bruno V. Rego¹, Salma Ayoub¹, Amir H. Khalighi¹, Andrew Drach¹, Joseph H. Gorman², Robert C. Gorman², Michael S. Sacks¹, ¹*Institute for Computational Engineering and Sciences, The University of Texas at Austin, Austin, TX, United States*, ²*Perelman School of Medicine, University of Pennsylvania, Philadelphia, PA, United States*

Here the “1” at the end indicates the number of the presentation as it is listed in the program book. It also indicates the order of the abstract in the conference proceedings.

Here “P1” at the end indicates that this is a poster presentation and it is the first listed in the program book. This is also the number to use when hanging your poster. It also indicates the order of the abstract in the conference proceedings following the technical session presentations.

Poster Presentation Example

The Effect of Floor Stiffness on Standing Posture and Sway SB³C2017-P1

Additionally, there are 2 author indices (as highlighted below). The first organizes the authors according to the **presentation number** as described above. It starts on page 85. The second organizes authors according to the **page number** in the program book. It starts on page 98. There is also a session chair/co-chair index organized by page number on page 109.

Travis Eliason, Art Nicholls, Daniel Nicolella, *Southwest Research Institute, San Antonio, TX, United States*

2:30PM Longitudinal Posture and Activity Tacking in the Home Enabled by Machine Learning and a Conformal, Wearable Sensor System SB³C2017-152

Ryan S. McGinnis¹, Steve DiCristofaro², Nikhil Mahadevan², Ellora Sen-Gupta², Ikaro Silva², Elise Jortberg², Nirav Sheth², John Wright², Brian Murphy², Bryan McGrane², Milan Raj², Melissa Ceruolo², Jesus Pindado², Roozbeh Ghaffari², AJ Aranyosi², Shyamal Patel², ¹*University of Vermont, Burlington, VT, United States*, ²*MC10, Inc., Lexington, MA, United States*

2:45PM In-Vivo Tibiotalar and Subtalar Kinematics in Chronic Ankle Instability Patients and Asymptomatic Controls: A High-speed Dual Fluoroscopy Study SB³C2017-153

Koren E. Roach¹, K. Bo Foreman², Alexej Barg³, Andrew E. Anderson³, ¹*Bioengineering, University of Utah, Salt Lake City, UT, United States*, ²*Physical Therapy, University of Utah, Salt Lake City, UT, United States*, ³*Orthopaedics, University of Utah, Salt Lake City, UT, United States*

3:00PM Impact Performance of Bicycle Helmets During Real-World Oblique Impacts SB³C2017-154

Megan L. Bland¹, Craig McNally¹, David S. Zuby², Becky C. Mueller², Steven Rowson¹, ¹*Biomedical Engineering and Mechanics, Virginia Tech, Blacksburg, VA, United States*, ²*Insurance Institute for Highway Safety, Ruckersville, VA, United States*

3:15PM Improving Head Impact Kinematics Measurement Accuracy Using Sensor Fusion of Multiple Sensors SB³C2017-155

Calvin Kuo¹, Jake A. Sganga², Michael G. Fanton¹, David B. Camarillo², ¹*Mechanical Engineering, Stanford University, Stanford, CA, United States*, ²*Bioengineering, Stanford University, Stanford, CA, United States*

3:30PM Exploring Novel Objective Functions for Simulating Muscle Coactivation in the Neck SB³C2017-156

Jonathan D. Mortensen, Andrew S. Merryweather, *Mechanical Engineering, University of Utah, Salt Lake City, UT, United States*

Thursday, June 22	2:15pm - 3:45pm

**Mechanical Regulation of Remodeling and Repair
(CTE)**

San Ignacio

Session Chair: Mariana Kersh, *University of Illinois, IL, United States*

Session Co-Chair: Nelly Andarawis-Puri, *Cornell University, NY, United States*

2:15PM The Timing of Mechanical Loading Modulates Endochondral Ossification of Chondrogenically Primed MSCs SB³C2017-157

Anna M. McDermott¹, Joel D. Boerckel¹, Daniel J. Kelly², ¹*University of Notre Dame, Notre Dame, IN, United States*, ²*Trinity College Dublin, Dublin, Ireland*

2:30PM Inhibition of Rho Kinase that Attenuates Pain Also Reduces Early Spinal Glial Activation & Neurotransmitter Expression After Mechanical Facet Capsule Injury In Vivo SB³C2017-158

Sijia Zhang, Christine Weisshaar, Beth Winkelstein, *University of Pennsylvania, Philadelphia, PA, United States*

- 2:45PM Interdependence Driven Aging in Synthetic Tissues** SB³C2017-159
Aylin Acun, Dervis Vural, Pinar Zorlutuna, *University of Notre Dame, Notre Dame, IN, United States*
- 3:00PM A Novel Bioreactor to Study the Driving Mechanical Stimuli of Tissue Growth and Remodeling** SB³C2017-160
Mathieu A. J. van Kelle, Pim J. A. Oomen, Jurgen A. Bultink, Marloes W. J. T. Janssen-van den Broek, Richard G. P. Lopata, Marcel C. M. Rutten, Sandra Loerakker, Carlijn V. C. Bouten, *Biomedical Engineering, Eindhoven University of Technology, Eindhoven, Netherlands*
- 3:15PM Biological Intervention to Reduce Post-Traumatic Joint Contracture: Preliminary Evidence Supporting the Use of Simvastatin or Losartan** SB³C2017-161
Alex Reiter¹, Chelsey Dunham¹, Ryan Castile¹, Aaron Chamberlain¹, Leesa Galatz², Spencer Lake¹, ¹*Washington University in St. Louis, St. Louis, MO, United States*, ²*Mt. Sinai Hospital, New York, NY, United States*
- 3:30PM Proteolytic Beacon for Matrix Metalloproteinases Implicated in Extracellular Matrix Remodelling** SB³C2017-162
Dominic Muli¹, Oliver McIntyre², Jonathan Vande Geest¹, ¹*Department of Bioengineering, University of Pittsburgh, Pittsburgh, PA, United States*, ²*Vanderbilt University Medical Center, Vanderbilt University, Nashville, TN, United States*

Thursday, June 22

2:15pm - 3:45pm

Therapeutic Materials for Repair and Regeneration (CTE)

San Pedro

Session Chair: Matt Fisher, *North Carolina State University, NC, United States*

Session Co-Chair: Jessica Sparks, *Miami University, OH, United States*

- 2:15PM A Novel Antioxidant Porous Vesicle Treatment Prevents the Pain & Axonal Damage that Develop with Neuropathic Injury** SB³C2017-163
Sonia Kartha, Christine Weisshaar, Andrew Tsourkas, Zhiliang Cheng, Beth Winkelstein, *University of Pennsylvania, Philadelphia, PA, United States*
- 2:30PM Mechanical Function of a Composite Nanofibrous Biomaterial Analogue of the Knee Meniscus Inclusive of Radial Tie Fiber-Like Elements** SB³C2017-164
Sonia Bansal, Breanna N. Seiber, Niobra M. Keah, Robert L. Mauck, Miltiadis H. Zgonis, *McKay Orthopaedic Research Laboratory, University of Pennsylvania, Philadelphia, PA, United States*
- 2:45PM The Role of Carbonate on Protein-free Formation of Bone-like Apatite** SB³C2017-165
Alix C. Deymier¹, Arun Nair², Baptiste Depalle³, Zhao Qin⁴, Kashyap Arcot⁵, Christophe Drouet⁶, Claude H. Yoder⁷, Markus J. Buehler⁴, Stavros Thomopoulos¹, Guy M. Genin⁵, Jill D. - 3:00PM A Tunable Flexible-PLA Scaffold Suitable for Complex 3D Printed Tissues** SB³C2017-166
Timothy Jacobsen, Andrew Wong, Jacob Rigos, Nadeen Chahine, *The Feinstein Institute for Medical Research, Manhasset, NY, United States*
- 3:15PM Development and Testing of a Long Bone Segment Regenerating Scaffold for Patients** SB³C2017-167
John A. Szivek, Jacqueline Buchak, Andrew M. Wojtanowski, David A. Gonzales, Adriana Barreda, Jordan L. Smith, David S. Margolis, *Orthopaedic Surgery, University of Arizona, Tucson, AZ, United States*
- 3:30PM Determination of the Mechanical Properties of De Novo Engineered Tissue in Needled-Nonwoven Scaffolds** SB³C2017-168
Joao S. Soares, Will Zhang, Michael S. Sacks, *Institute for Computational Engineering and Sciences, University of Texas at Austin, Austin, TX, United States*

Friday, June 23

2:15pm - 3:45pm

**PhD Paper Competition: Imaging, Biofluid
Mechanics, and Biotransport**

Tucson AB

Session Chair: Sarah Vigmostad, *University of Iowa, IA, United States*

Session Co-Chair: Philippe Sucusky, *Wright State, OH, United States*

- 2:15PM The Predictive Value of Transverse Shear Stress on Plaque Progression in Human Coronary Arteries** SB³C2017-169
Annette M. Kok¹, David S. Molony², Lucas H. Timmins³, Yi-An Ko⁴, Parham Eshtehardi², Jolanda J. Poster Sessions

Posters will be presented in two sessions. Poster Session I will take place on Thursday June 22nd from 5:30-7:30 PM. Poster Session II will take place on Friday June 23rd from 12:30-2:00 PM. Please see the 'Instructions for Poster Presenters' on page 5 and the 'Poster Room Layout' on page 3 for details on placement of posters and individual presentation times.

The Poster viewing area is located in the Arizona Ballroom and will be open throughout the conference.

Streamlined Research

Spend less time on building tools and more time answering clinical questions.

Expansive Capabilities

Test any joint. Test any load.
Test any range of motion.

Customizable Solutions

Choose the modules and services to fit your exact research needs.

simVITRO is a flexible merging of software and hardware components for orthopaedic biomechanical testing. It is designed to provide flexibility for end users to select the anatomical joint and have the appropriate set of software tools to support their business and/or research needs.

Software

Designed as a universal musculoskeletal simulator. Specimen modules are available for in vitro simulation of major joints including the spine, knee, foot/ankle, hip, shoulder, elbow, wrist and more.

Hardware

Systems are scalable, flexible, and configurable. simVITRO can be built around new or existing robotic infrastructure in your laboratory or testing facility.

Integration

Utilize the expertise of the Cleveland Clinic BioRobotics Laboratory to help you develop your state of the art facility.

Let us help you configure your system

Designed with flexibility and customization in mind, simVITRO® can be configured to provide unique solutions to your challenges. Our team's extensive experience allows us to provide turn-key solutions based on our systems engineering approach.

Seeing More Matters

biomechanics
bioengineering
biotransport

Visualize, Analyze and **Quantify** mechanics of the cardiovascular system, blood flow dynamics and other *in vivo* tissue interactions, all in real-time with high resolution.

4D IMAGING

Cardiac Hypertrophy in 4D

- Obtain incredible images and data from your study animals without any assumptions
- Dynamic motion of the myocardium throughout the cardiac cycle with the 3D geometry of the heart

Full access to RF mode or raw data formats for offline processing algorithms in Matlab or other programming environments.

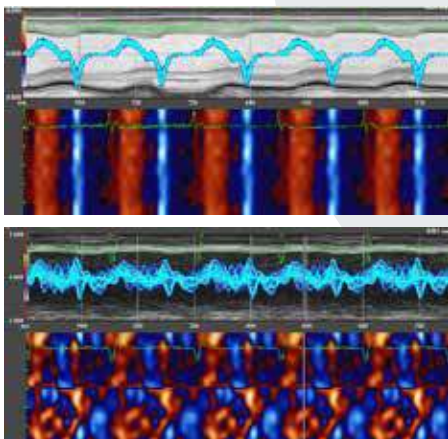

VEVO VASC SOFTWARE

Vascular analysis using Vevo Vasc software

- Quantify wall motion
- Measure vessel microanatomy and Intima Media Thickness (IMT)
- Assess stiffness using pulse wave velocity

VEVO STRAIN SOFTWARE

Clear differences seen between normal heart (top) and infarcted heart (bottom)

- Detect regional abnormalities and tissue deformation to determine disease onset
- Evaluate longitudinal, radial, and circumferential strain
- Measure dyssynchrony and track disease progression

MicroCT Systems & Solutions

- high resolution imaging for accurate results
- automatic sample changer
- large field of view/large samples
- streamlined, advanced 3D analysis
- compression/tension stage
- optional FE analysis

- scan and analysis services

APPLY NOW FOR GRADUATE STUDIES IN MECHANOBIOLOGY

We train graduate students to work across disciplines. Incoming engineers and physicists expand their knowledge in organismal, cellular, and molecular biology and develop a practical understanding of the nature of biological research. Similarly, incoming biologists grow in their understanding of mechanics and quantitative methods. Together, these trainees communicate and collaborate in innovative and meaningful ways in the center's integrative research projects.

CEMB seeks graduate students from across science and engineering disciplines, and from all cultural and socio-economic backgrounds. Opportunities are available at all sites for students from backgrounds that have typically been under-represented in the sciences, including the specialized mentoring to ensure the success of all its trainees.

HOW TO APPLY

CEMB graduate fellows are admitted through standard graduate group/graduate program channels. Prospective students should contact individual CEMB faculty members and the associated individual graduate programs as they prepare their applications.

APPLY PHYSIOLOGICAL LOADS WITH THE FX-5000™ SYSTEMS

Computer regulated bioreactors for applying tension or compression to cells *in vitro*.

Simulate *in vivo* tissue strains and frequencies.

Apply up to 33% substrate elongation with the tension system or up to 14 lbs of force with the compression system.

Program & regulate multiple strain amplitudes, frequencies, duration, and waveform shapes.

GROW CELLS IN A DYNAMIC 3D MICROENVIRONMENT WITH THE TISSUE TRAIN® SYSTEM

Create cell-seeded bioartificial tissue constructs.

Various shapes (i.e., linear, trapezoidal, or circular) to create biologically relevant constructs.

Apply tensile strain to growing bioartificial tissues to simulate strains experienced *in vivo*.

Hydrogel kits for creating reproducible cell-seeded collagen matrices.

Low-Flow Anesthesia

SomnoSuite®

NEW Touch Screen

- **Integrated digital vaporizer**
Auto-calculates flow rate based on animal weight
- **Built-in air compressor**
Use room air or compressed gas
- **Flow rates from 25mL to 1L**
Use less isoflurane

Safer for you, safer for your animals.

ANNOUNCING 50 YEARS OF BME AT UVA

**UNIVERSITY
of VIRGINIA**

ENGINEERING

Department of Biomedical Engineering

BIOMEDICAL ENGINEERING

The VCU Department of Biomedical Engineering, located in the dynamic capital of Richmond, Virginia, offers B.S., M.S., and Ph.D. degrees in Biomedical Engineering as well as a combined M.D./Ph.D. program. The graduate program was founded in 1984, making it one of the first biomedical engineering programs in Virginia.

We are undertaking a significant expansion of our graduate programs.

We maintain a close, collaborative relationship with VCU Health, a leading academic medical center, where students receive personalized attention as they work on groundbreaking research. Faculty specialize in a variety of research areas including mechanobiology and regenerative medicine, rehabilitation engineering, human-computer interfaces, biomechanics, biomaterials, imaging and cardiovascular devices.

For more information about our programs, contact undergraduate director **Paul Wetzel** (pawetzel@vcu.edu) or graduate director **Jennifer Wayne** (jwayne@vcu.edu)

UNDERGRADUATE AND MASTERS DEGREES

Our unique undergraduate curriculum builds around a core of **6** courses to provide students with a multidisciplinary base for the quantitative analysis of biological systems, which leads to a choice of one of four possible concentrations to dive deeply into an area of great importance to bioengineering. Students can continue onto a masters degree program in these concentrations which will provide significant opportunities for student research.

4 CONCENTRATIONS

- » Bioimaging and Signal Processing
- » Cell and Tissue Engineering
- » Biomechanics
- » Biomedical Devices

“ What I like about Northeastern’s Bioengineering program is its interdisciplinary nature which gives you the freedom to shape your educational experience through a variety of concentrations, coops across the industry, and accessible on-campus research. Sharing this journey with passionate students and faculty in the heart of Boston’s innovative biotech scene makes it an exciting program to be a part of. ”

— Zachary Flinkstrom, bioengineering student

PHD DEGREES

Our interdisciplinary PhD program in Bioengineering draws on the expertise of faculty across the University and reflects the significant strengths of bioengineering research in multiple areas. Students accepted to the program will complete a rigorous core curriculum in basic bioengineering science followed by completion of an immersion track curriculum.

8 TRACKS

- » Bioimaging and Signal Processing
- » Biomechanics and Mechanobiology
- » BioMEMs/BioNANO
- » Biochemical and Bioenvironmental Engineering
- » Motor Control
- » Biocomputing
- » Cell and Tissue Engineering
- » General Bioengineering Studies

“ My goal starting graduate school was to acquire the knowledge and skills necessary to be part of the cutting edge of human progress as we learn how to engineer biology. The courses I took, combined with the experimental techniques and computational methods practiced in my research, met that goal and exceeded my expectations. Mentoring undergraduate research and being involved in the diverse research community at Northeastern and in Boston has made my PhD journey even more rewarding and fulfilling. Without a doubt Bioengineering at Northeastern was the right choice for me! ”

— Jeffrey Bouffard, bioengineering PhD student

COOPERATIVE EDUCATION AND EXPERIENTIAL LEARNING

Experiential learning, anchored by our signature cooperative education program, lies at the heart of a Northeastern education. Our broad mix of experience-based education programs—including co-op, student research, service learning, and global learning—build the connections that enable students to transform their lives. These connections enrich classroom studies, fuel intellectual and personal growth, and provide students with opportunities to explore their path and discover their passion.

These points of real-world engagement—at a university that is a world leader in experiential learning—mean that our students are better prepared to succeed in the lives they choose. It’s the Northeastern difference.

Department of
Biomedical
Engineering

The UCI [Department of Biomedical Engineering's](http://www.bme.uci.edu) mission is to inspire engineering minds for the advancement of human health.

Established in 2002, the UCI BME Department offers two undergraduate degree programs, M.S. and Ph.D. degrees in biomedical engineering and a combined M.D./Ph.D. degree in conjunction with the UCI Scholl of Medicine. There are currently 23 full-time faculty and 59 affiliated faculty. Research areas include micro/nano medicine, biophotonics, biocomputation and tissue engineering, with clinical emphases in neuroengineering, cardiovascular diseases, cancer and ophthalmology.

Included in these opportunities are major campus research centers at the Beckman Laser Institute (biophotonics), the Edwards Lifesciences Center for Advanced Cardiovascular Technology, the Chao Family Comprehensive Cancer Center, the Integrated Nanosystems Research Facility, the Laboratory of Fluorescence Dynamics, and the Micro/nano Fluidics Fundamentals Focus Center. Because of its interdisciplinary nature, biomedical engineering attracts students with a variety of backgrounds.

Static and Dynamic Biomechanical Test Equipment

www.testresources.net

PRODUCT LINE

Our test machines have a unique modular design of interchangeable components. Modularity ensures affordable highly flexible systems that can be configured to serve a wide range of applications.

STATIC & DYNAMIC TEST MACHINES

Our electrodynamic test machines are the best of both worlds: delivering a broad speed range of .001 hz to 15 hz and forces from 50 grams to 100 Kn.

SERVO HYDRAULIC TEST MACHINES

TestResources also offers electromechanical and servo hydraulic machines to match your static and dynamic test applications. For test requirements of 25 to 100 kN, take a look at our 900 Series product line on our website.

DEGREE PROGRAMS

The Joint Department of Biomedical Engineering is incorporated into both NC State University and the University of North Carolina at Chapel Hill. We offer Doctor of Philosophy (Ph.D.), Master of Science (M.S.), and Professional Science Masters (P.S.M.) degrees.

RESEARCH CENTERS AND FACILITIES

The **Biomedical Research Imaging Center (BRIC)**, established in 2005 and located in the brand new (2014) Marsico Hall, serves as a backbone for pre-clinical and clinical imaging research, and includes some of the most state-of-the-art biomedical imaging facilities in the world. Core resources include multiple MRI systems (9.4 T, 7 T and 3 T), including one of only a handful of MR-PET systems in the country, two cyclotrons, and a radiochemistry facility. State-of-the-art systems for other imaging modalities include ultrasound, optical imaging, PET-CT, SPECT-CT, and carbon nanotube CT.

Micro and Nano devices are fabricated on both campuses using state-of-the-art facilities: the **NC State Nanofabrication Facility (NNF)** at NC State University and the **Chapel Hill Analytical and Nanofabrication Laboratory (CHANL)** at UNC. An 800 sq.-ft.-class 1000 cleanroom is housed within the BME department. It contains tools for micro/nanofabrication and is geared towards studies at the interface of engineering and biology. Advanced 3-D printing tools and technologies are present on both campuses.

Regenerative Medicine infrastructure spans multiple colleges at both NC State and UNC to include facilities within the School of Medicine, College of Veterinary Medicine, College of Textiles, Center for Comparative Medicine and Translational Research, and the College of Engineering. Infrastructure encompasses core facilities and research labs with capabilities of stem cell isolation, expansion, and differentiation; novel scaffolding and biomaterial development, testing, and scale-up; cell and tissue bioreactors; small and large animal model evaluation; and more. A **GMP facility** is currently being designed and built on the NC State campus to further advance and translate novel regenerative medicine products.

The **Rehabilitation Engineering Center (REC)** is a new center across both campuses. The state-of-the-art gait lab is located in Engineering Building III room 1408 (1,400 square feet) on NC State's Centennial Campus and is handicap accessible. The gait lab is equipped with two motion capture systems, multiple EMG systems, a EEG system, a dual-belt instrumented treadmill with incline, a portable indirect calorimetry system, a real-time ultrasound system, a biodex dynamometer, a powered overhead bodyweight support System, and a plantar pressure measurement system. Right next to the gait lab is a fabrication lab (700 square feet), dedicated to fabricating braces and experimental components. A similar setup is also available at **UNC-Chapel Hill at the Motion Analysis Laboratory**. Additionally, clinical resources are available at UNC for patient recruitment, screening, fabricating and fitting prosthetics and orthotics, PT/OT training, and outcome measurement. Furthermore, advanced 3-D printing machines and machine shops are present on both campuses.

DEGREE REQUIREMENTS

A minimum of 30 semester hours of graduate study is required for the Master of Science (M.S.) degree. A minimum of 3 credit hours is required for thesis research.

Ph.D. students must complete a core curriculum of 27 hours of course work including research seminar, written and oral comprehensive preliminary examinations, in-depth research, a written research dissertation, and a final oral defense of the research.

GRADUATE RESEARCH

With more than 30 tenured and tenure-track faculty members, our graduate program embraces interdisciplinary collaboration within five sub-disciplines of biomedical engineering, as well as dozens of other collaborative areas.

RESEARCH AREAS

Biomedical Imaging

Research in the Biomedical Imaging area includes hardware, image processing, signal processing, imaging contrast agents, image segmentation, applications, and imaging informatics. Modalities of particular interest include ultrasound imaging, magnetic resonance imaging, x-ray, SPECT, PET and live-cell imaging.

Biomedical Microdevices

Research in Biomedical Microdevices involves lab-on-chip, organ-on-chip, rare-cell capture devices, single-molecule DNA sequencers, integrated sensors and other micro-scale technologies. Microdevices are engineered for clinical diagnostics and therapeutics as well as for applications in basic biomedical research.

Pharmacoengineering

Pharmacoengineering research works at the interface of engineering and pharmaceutical sciences to develop safer and more effective medicines and drug delivery systems. Focus areas include immunoengineering, design of nanoparticles with embedded sensors and payloads, stem-cell delivery technologies, and image-guided therapeutics.

Rehabilitation Engineering

Research in Rehabilitation Engineering aims to restore the motor function and quality of life of individuals with physical disabilities. Focus areas include the study of tissue/musculoskeletal biomechanics, sensorimotor integration, human movement control in healthy persons and individuals with sensorimotor deficits, development and translation of bio-inspired prosthetics and orthotics, rehabilitation robotics, neural interfaces, and technologies for fall prevention.

Regenerative Medicine

Research in the Regenerative Medicine area includes cutting-edge approaches to replace, engineer, or regenerate tissues and/or organs. Approaches encompass functional tissue engineering and the use of molecular biology, bioreactors, biomechanics, cytomechanics, synthetic and extracellular matrix derived biomaterials and scaffolds, biomimetics, stem cells, and mechanobiology to engineer living tissues. Investigations are performed at both the basic and applied science level with emphasis on translational investigations to best improve patient care.

ADMISSIONS

In addition to the minimum admissions requirements below, all applicants must have competitive GRE scores. International applicants must have a total score of at least 80 on the Internet-based Test (iBT), or an overall band score of at least 6.5 on the International English Language Testing System (IELTS).

ADMISSIONS REQUIREMENTS

Transcript(s) documenting an undergraduate or graduate degree in engineering or a quantitative science. A minimum GPA of 3.0 on a 4.0 scale is required; historically, admitted BME applicants have GPAs above 3.33/4.0. Scores from the GRE general exam taken within the last five years. Minimum V/Q GRE scores greater than the 50th percentile is required; historically, admitted BME applicants have V/Q GRE scores above the 50th/70th percentile, respectively. A 1–2 page personal statement discussing research interests and relevant background experience. The statement must identify professors within the department with whom you are interested in working. Three recommendation letters that discuss your potential for graduate study.

COST OF STUDY

Tuition and fees for full-time study are set by North Carolina State University or The University of North Carolina at Chapel depending on the institution receiving the student's application.

FINANCIAL AID

The department guarantees all admitted Ph.D. students funding for the first year. This funding comes from one of three sources: internal fellowships, teaching assistantships (TAs), and research assistantships (RAs). Internal fellowships and TAs are funded from department and university resources. RAs are granted by faculty members to students who are interested in working on projects in faculty member's lab. After the first year of study students are expected to transfer to RAs. Regardless of the funding source, tuition and health insurance are paid for the student by the department or faculty grant. Student out-of-pocket expenses are limited to student fees.

APPLICATION DEADLINES

Current deadlines are posted on the BME website at: <http://www.bme.ncsu.edu/admissions-info/>

SB³C 2017 - PROGRAM AT A GLANCE

Room	Tucson AB	Tucson CD	Tucson GH	Tucson IJ	San Ignacio	San Luis	San Pedro
WEDNESDAY, June 21, 2017							
7 am-1:20 pm	Committee Meetings (see page 5 for room numbers)						
1:30-2:30 pm	'How-To' Session: SimVascular	'How-To' Session: FEBio					
2:45-4:15 pm	Heart Valve Mechanics	Spine Mechanics	Thrombosis	CV Growth, Remodeling, & Repair	Bone Biomechanics	Biotransport and Microfluidics	Regulation of Mechano-Transduction
4:15-4:30 pm	Break (Arizona Foyer)						
4:30-6:00 pm	Soft Tissue Characterization and Modeling	Taber Session: Growth & Remodeling	Atherosclerosis	Biofluids	Micro-Engineered Physiologic Systems	Strategies to Improve Rehabilitation Treatments	Microenvironmental Control of Tissue Formation and Cell Function
6:15-8:00 pm	Opening Reception (Ania Terrace)						

THURSDAY, June 22, 2017							
11 am - 12 pm	Diversity / Mentoring Event (Arizona 3-5, <i>registration required</i>)						
11:15-12:30 pm	Lunch and Poster Viewing (Arizona 6-12)						
12:30-2:00 pm	Multiscale Analysis of Cartilage and Intervertebral Disk	Soft Tissue Mechanobiology	Heart Valve Flow and Function	Cardiovascular Devices	Active Learning in Biomechanical Eng. Education	Hyperthermia, Cryotherapy, and Cryopreservation	Disease Models and Engineered Therapies
2:00-2:15 pm	Break (Arizona Foyer)						
2:15-3:45 pm	Mechanics and Modeling of Musculoskeletal Soft Tissues	Ocular Biomechanics	Giddens Session: Cardiovascular Fluid Dynamics / Atherosclerosis	Cardiac Mechanics	Mechanical Regulation of Remodeling and Repair	Measurement in Movement and Trauma	Therapeutic Materials for Repair and Regeneration
3:45-4:00 pm	Break (Arizona Foyer)						
4:00-5:30 pm	FUNG, MOW, AND WOO AWARD LECTURES (Tucson EF)						
5:30-7:30 pm	POSTER SESSION I and Happy Hour -- Including BS & MS Student Paper Competitions (Arizona 6-12)						
9:00-10:30 pm	Open Executive Committee Meeting (San Ignacio)						

FRIDAY, June 23, 2017							
All Day	Poster Viewing (Arizona 6-12)						
11 am-12:30pm	Workshop: Additive Manufacturing and Biofabrication	Workshop: Ocular Biomechanics: What's Our Vision?		Workshop: Grad School Pro Tips		Workshop: Medical Imaging for Physiological Flows	
12:30-2:00 pm	POSTER SESSION II (Arizona 6-12, with Lunch)						
2:00-2:15 pm	Break (Arizona Foyer)						
2:15-3:45 pm	PhD Competition: Imaging, Biofluid Mechanics, and Biotransport	PhD Competition: Tissue Mechanics and Characterization	PhD Competition: Cell Mechanics and Mechanobiology	PhD Competition: Diseases, Injury, and Remodeling		PhD Competition: Extracellular Matrix Biomechanics	PhD Competition: Biomaterials and Material-Cellular Interaction
3:45-4:00 pm	Break (Arizona Foyer)						
4:00-5:30 pm	Upper and Lower Extremity Joint Mechanics	Head Injury & Injury Biomechanics 1	Imaging and Diagnostics	Undergraduate Design Competition	Vascular Mechanics	Nano- and Micro-Therapeutics	Mechanical Regulation of Morphogenesis
5:30-5:45 pm	Break (Arizona Foyer)						
5:45-6:45 pm	PLENARY LECTURE – L. Mahadevan - “On Growth and Form – Geometry, Physics and Biology” (Tucson EF)						
6:45-7:45 pm	SB3C Women’s Networking Event (Arizona 2) and IAB / SLC Networking Mixer (Arizona 3-5, <i>registration required</i>)						
8:00-10:00 pm	BEDROCK CONCERT (Ania Terrace)						

SATURDAY, June 24, 2017							
10:30 am-2 pm	Industry Advisory Board (IAB) Workshop (Tucson AB) and Connection Luncheon (<i>registration required</i>) --- details on page 8						
11:00-11:50 am	Student Leadership Council Meeting (San Ignacio)						
12:30-2:00 pm	Workshop: Bench to Bedside - Tendon Repair and Regeneration	Workshop: MATLAB in Education and Research					
2:00-2:15 pm	Break (Arizona Foyer)						
2:15-3:45 pm	Head Injury & Injury Biomechanics 2	Reproductive Biomechanics	Aneurysm	Vascular, Lymphatic, and Ocular Transport	Tendon Tissue Engineering and Regeneration	Experimental Modeling for Clinical Surgical Applications	Measures / Models of Cell Mechanics & Microenvironment (Tucson EF)
3:45-4:00 pm	Break (Arizona Foyer)						
4:00-5:30 pm	Head Injury & Injury Biomechanics 3	Reproductive, Ocular, and Gastrointestinal Biomechanics	Pediatric Flow	Aneurysm Mechanics	Tendon Mechanics and Structure	Surgical Device Design Applications	Measures / Models of Materials and Tissues (Tucson EF)
5:30-5:45 pm	Break (Arizona Foyer)						
5:45-6:45 pm	LISSNER MEDAL AWARD LECTURE (Tucson EF)						
6:45-7:15 pm	Lissner Reception (Ania Terrace)						
7:15-9:30 pm	Banquet and Awards Ceremony (Arizona 6-7)
